

iter. 4.2

The figure consists of two side-by-side plots on a 10x10 grid. The left plot displays a vector field represented by blue arrows. The arrows are distributed across the grid, with some pointing up, down, left, and right, indicating a complex flow pattern. The right plot displays a scalar field represented by orange circles, each containing the number '1'. These circles are clustered in the center-right area of the grid. Additionally, a single orange arrow points to the right from the center of the grid, indicating a specific vector at that location.
